Re: Comments on Proposed Rulemaking Order concerning implementation of the Alternative Energy Portfolio Standards Act of 2004 published in the Pennsylvania Bulletin on July 5, 2014

Docket Number: **L-2014-2404361**

Dear Pennsylvania Public Utility Commissioners:

Please keep Pennsylvania fair for clean energy. At a time when the rest of the world urgently seeks clean energy, it is stunning that Pennsylvania would suggest new rules designed to discourage and limit private investment in clean energy. These rules, addressed below, are without technical basis and fail to consider the benefits of clean energy to all citizens of Pennsylvania.

We urge that you withdraw changes to §75.13(k) giving the Commission authority to approve utility company requests to charge net metered customers special fees. When homeowners and small businesses spend their own money to build clean energy sources, we all benefit. Please do not open the door for utilities to discourage and penalize clean energy system owners.

We urge that you withdraw changes to §75.13(a)(3) adding a new 110% generation limit on system size. Consumers spend their own money to install a clean energy system. Deciding how much to spend and how big the system needs to be is a private matter. This rule would require every homeowner and small business owner to convince his or her utility company (somehow) that the system they want to purchase will generate less than 110% of the electricity they use. This is impractical, intrusive and expensive to administer. It is also unneeded. Pennsylvania already has a rule for maximum size—50 kW for a residence and 3 (or 5) MW for a business, period. It's simple, works fine and is the same for everyone.

Thank you for providing a regulatory environment that supports the responsible use of clean energy in Pennsylvania.

Sincerely,

The Undersigned

There is no legitimate, practical reason to charge individuals with PV systems a fee to generate electricity for their own use ... any more than they should get a surcharge from the water company for having a well. This is just a transparent political tactic that is promoted by the fossil fuel industry to prevent development of distributed clean energy production in the name of corporate profit. In addition, the limitations and rules are extremely vague, and consumers do not have ANY options to switch their energy supplier. Thus, the suppliers effectively make the rules, and there is no incentive at all for suppliers to provide a competitive product (e.g. \$0 PV or net metering fees). That is what is known as a monopoly, and it is clearly disadvantageous to the welfare of the general public. Expect a legal battle...

A subject of this much importance needs
more than a 30-day comment period, buried
in the middle of the summer vacation
season. Are the utilities setting the PUC
timetable?

Until there is definitive proof that net
metering is a financial burden to non solar
ratepayers, there is no need to change the
existing rules.

Distributed solar and net metering adds to
the common wealth.

PA PUC commissioners--remember that you are in existence as a body and a governmental agency to service the residents of the Commonwealth. Your job is not to serve the utility companies.

If there is an issue with residential or business solar power generation causing problems or costing the utility companies, why was that not anticipated?

Why would a corporation be allowed to tax an individual or business that provides a product to them--that is backwards.

I support this cause! You should too! Our entire country is in transition to a sustainable clean energy future as should be the entire planet. Don't create artificial man made barriers that will discourage the adoption clean energy systems. You should be making it easier and more affordable for customers to make the transition. The utilities business model is outdated and needs to evolve in a fair and responsible manner. Don't attack customers to protect profits.

Go MAREA. Rules proposals §75.13(k) and §75.13(a)(3) smacks of regulatory capture by the utilities. It's an imperative that the citizens and it government adopt policies and take actions that benefit all of us and coming generations by supporting renewables, not inhibiting them. The proposals are just so wrong-headed. Where is PUC's leadership in the renewable area? When enough energy from sunlight falls on the earth in approximately one day to power all of humanity for a year! Compare and contrast such initiatives as expressed in proposals §75.13(k) and §75.13(a)(3) to NY State's initiatives in the renewable area:

As a responsible person, aware that we, humans, are too successful as a species and have begun to overpopulate and over use the natural resources this planet offers, I have chosen to do as much as possible to minimize my impact. If we want to offer a world, comparable to what we have to our children, and their future generations, we must take steps now to prevent further erosion of our air and, our natural resources. Our government should be looking at the long range and legislating and regulating to encourage doing what is necessary to preserve our quality of life, not pandering to specific industries or businesses.

I have asthma.

Air pollution triggers my attacks.

The county I live in and all surrounding counties have an "F" rating from the Am. Lung Association. They richly deserve this rating due to heavy industry and lax environmental enforcement.

To tax solar installations and solar generated energy (to which I personally subscribe) is against the public good and my personal health and welfare.

This proposal is obnoxious on its face.

Please oppose it.

I have 48 PV cells and 10 solar thermal units on my barn, making about 24 megawatts of energy annually. I put out \$40,000 of my own money to match the \$60,000 10-year subsidies I received from government sources. Net metering and state/federal subsidies made this possible. PA should encourage, not discourage, renewables.

Hey PUC - STOP doing big energy's dirty work. You MUST do everything in your power to make solar and wind energy EASIER to deploy. Do not approve any new rules that put further barriers or other impediments in the way of solar and wind energy. These proposed changes are OUTRAGEOUS ! The commission MUST stand up to industry and make it clear that this type of unnecessary regulation will not be tolerated.

The utilities have checks in place to ensure the quality of electricity moving back onto the grid is at the required level. This is an additional cost to the consumer during installation. In addition, the payment to the generator is much less than the cost of generation by any other supplier, allowing the utility to capitalize on the resale.

John Hoskyns-Abrahall

360 Dautrich Road
Reading, PA19606

Most homeowners who invest in clean energy, as my wife and I have done, do so out of a conviction that this is the way that energy will be provided in the future and they want to lead by example. Few if any believe that it is a money-making proposition. We expect to make our money back in energy savings over the course of 10 or 20 years but that presupposes that we live that long, that we can afford to stay in our homes etc. Putting road blocks in the way of people trying to do the right thing for themselves, their community and their country seems short-sighted at best, and smacks of undue influence from the purveyors of dirty energy who refuse to lead the inevitable changeover to renewable energy sources.

While I do support some limits to Solar PV system abuses, I do believe that imposing fees for Solar PV owners (existing or new) is a deterrent to any future system installations or enhancements.

One way to fluctuate the Solar PV system deployment is to limit the rebates available. If someone wants to install a larger system, they would be paying for it up-front without tapping into rebates that the state has to manage and pay for (ie. taxpayer funds). Instead of paying customers the rebate fees, the State of PA can use such funds for more PUC study into why systems such as the very expensive Smart Meter program at PECO is not really doing anything for the hundreds of millions of dollars that the federal government has given to PECO to implement. No new custom rate plans exist, no electric rate plans to help smooth out the demand curve by load-shifting to off hours, no new support for electric vehicles to charge at night during the low demand cycle. I suppose a jobs program like this is acceptable but independent power generators are a problem for the state.

The small sector of Solar PV customers being imposed a fee for generating electricity flies in the face of conservation and intelligent energy usage. It just makes them "pay more" in order to participate and many will choose not to participate.

Some months we go over 110% but others we don't generate all we need. This bill gives no consideration to seasonal differences in both generation (those sunny 65 degree days in March where we generate a lot versus the sunny 90 degree days in July when we don't generate as much) and usage (not using as much in March when we are generating a lot versus more usage in July when we don't generate as much).

It is NOT fair to penalize those of us who made the investment and commitment for "green energy" and sustainability. I made sacrifices to save the money for such a huge purchase to do my part to "go green". I saved for ten years to make that commitment to purchase a solar clean energy system and now you want to deter others and slap those of us who have been supportive. Apparently, it's not easy being green and you are making it VERY DIFFICULT. I SPENT MY OWN HARD EARNED MONEY TO BUY MY SYSTEM. I urge you to stop and withdrawal changes.

There is clearly no reason to give a utility power and control over the people's ability to make personal investment and improvements to their private property. This would also grant a public utility over reach when it comes to local governing bodies, where the people living in the community should not have their rights to determine what works best for them.

We are supposedly a Capitalistic country where consumers drive the economy and success or failure of businesses. If legislators make these changes they will be doing so to thwart the very ideals that they claim to support.

Additionally, It is time for the legislature to
change the rules governing SRECs in PA.
PA is currently only state in the nation that
allows the utilities to purchase all of their
SRECs out-of-state and to the lower bidder,
bypassing the economic benefits to its own
citizens of supporting local SRECs.

This is a disgusting attempt to discourage solar power!

Linda Blythe

4433 Osage Ave.
Philadelphia, PA19104

Philadelphia is full of flat roofs that would be perfect for solar. Solar should be encouraged. These new rules only protect the public utility that surely sees that in the future solar will make big electric generators obsolete. The future should be distributed solar with the utilities acting as the distributor and temporary storer of electric power. Let's move into a cleaner future rather than make rules to keep the dirty dinosaurs alive.

We need to have a clean energy option, for the public's health, and for our environment.

Marie A. North

3025 Victoria Lane
Allentown, PA18104

I am discouraged and disheartened that Pennsylvania's utilities and the PUC would consider taking a step which would discourage residents from doing their part to help curb carbon emissions and supply clean energy to their local utility with a solar installation. We paid for our solar system out of our own money. The Sunshine Rebate Program was out of funds but we decided to move ahead with our installation anyway. Not only are we helping to reduce carbon emissions but we provide power beyond our needs, on sunny days, to help our utility. We invested in the system, we are doing our part to help deal with climate change and now we are to be penalized for this. How does this move encourage others to want to live, invest, or do their part in helping with overall climate issues in PA? Pennsylvania is continuing to disappoint and be behind other more progressive states. And that's a real shame.

Taxing solar - as a clean, renewable resource
- is simply a bad idea!

Taxing fossil fuels, with their harsh impacts
on health and the environment should
continue and deepen.

Michael Bailey

6113 Memorial Rd
Germansville PA 18053
avidreader10@verizon.net

We took on the expense of solar to protect
ourselves from endlessly escalating power
costs in the future, when our income will be
reduced. It is not equitable that, after the
fact, our utility could increase our ongoing
costs by adding (and presumably increasing
over time) a fee that did not exist before we
made our decision.

This is a plan that A.L.E.C contrived on behalf of one of its founders the Koch Brothers. ALEC is the legislative arm of the Tea Party Right Wing and the policies created are geared to financially benefit those powerful members of the 1% right wing ;a wealthy and powerful small portion of society .In this case the coal burning electricity plants that fires Koch Coal will benefit . This anti solar legislation makes it more difficult to get off the grid by punishing those that reduce or eliminate their energy footprint when they should be rewarded. The Kochs have been concerned legislation that bolsters clean power would erode their power base. This legislation was trotted out and made law in Oklahoma earlier this year and is being foisted on states through their Republican Legislation.

Clean Energy through solar scares the utility companies ,too, because if it becomes the predominant method to power our homes ,businesses etc. it cuts out the middle man . Yet that would be a small sacrifice to allow the

dawning of a cleaner America and world. This legislation sucks and is a contrivance by a group of oligarchs to maintain their pot of gold and screw the rest of the nation and world. Please do the right thing and vote it down.

Nancy Brockmon

112 Webster Avenue
Wyncote, PA19095
n.brockmon@comcast.net

I fail to understand why there is any opposition to maintaining solar energy installations in a State that uses as much energy as Pennsylvania does. We should be encouraging the installation of additional solar energy panels where ever we can and as quickly as possible to defray the damages done by coal fired plants and Fracking for oil reserves, a process that destroys the aquifer and is dangerous to the people who live close to the areas being abused.

Let's cover our parking lots with solar panels which will provide energy for the Mall or Business center and create shade for the vehicles that park beneath. This is a win - win situation that should be promoted throughout the USA!

Is climate change real or not? It seems
logical that if it's only a possibility we
should be taking steps to avert or minimize
the adverse effects. To discourage the
development of clean energy i.e. solar is not
in the interest of mankind..

Perhaps we should look at who's interest this
initiative benefits? Certainly not the general
public. Quash this foolish attempt to add
roadblocks and extra costs to the
implementation of more solar installations.

Now is the time to protect the manufacture, installation, and use of solar panels and equipment in Pennsylvania. Solar power is clean power, and a growth industry badly needed in the state. Please withdraw changes to §75.13(k) and §75.13(a)(3) and take Pennsylvania out of the hands of the unaccountable fossil fuel corporations whose products are driving accelerating climate change. Remember that carbon pollution from Pennsylvania will negatively affect the atmosphere that everyone in the world shares as they breathe. Please don't allow Pennsylvania to miss its chance at being in the vanguard of creating clean energy and thousands of jobs -- you will not get a second chance.

We want clean energy. We want incentives for clean energy. We want disincentives for dirty energy. We want less reliance on so called "fossil fuels". Save those materials to make plastics for medicinal supplies, not for burning to produce energy.

I bought a large system specifically for the purpose of being able to buy an electric car. I have not found the right car yet, but hope to purchase one within the next year or two. I also wanted a large system because I think we all need to do our bit to reduce greenhouse gases and the power that my home system is generating will reduce the amount needed from fossil fuels.

I will work to do whatever is required to replace any legislator who votes for this shortsighted assault on the efforts to allow all Pa. residents to produce clean, alternative energy. I hope that this latest "dirty trick" is exposed as another example of politicians who only consider the lobbyist and their money bribes that hurt the consumer and help the rich get richer.

TMI-Alert, Inc.

4100 Hillsdale Road
Harrisburg, PA17112

Three Mile Island Alert is a non-profit citizens' organization dedicated to the promotion of safe-energy alternatives to nuclear power.

Formed in 1977 (two years before the accident). TMIA is the largest and oldest nuclear watchdog group in central Pennsylvania.

We have provided testimony to the US Senate, the US Nuclear Regulatory Commission, the Pennsylvania House of Representatives, the Pennsylvania Public Utility Commission and have received certificates of commendation from several governmental bodies.

TMIA members who are interested in specific aspects of nuclear power are encouraged to join one of our special committees.

- Radiation Monitoring
- Low-level Radioactive Waste
- Health Effects from TMI
- Safety Issues
- Nuclear Plant Security

Is it unfair to change the economic benefits of an existing installation after the purchaser has decided to pay for it. We should be encouraging solar by raising fossil fuel derived electric rates, not by adding fees for solar or general connection charges.

i can see that the utilities do need some money so i can use them as back up power when the sun does not shine or whenever my system is not big enough to provide all my needs. they need to maintain the lines and power sources. that needed feature is not free and homes with solar PV should pay for those services.

we must recongnize that as solar users - we do use the power lines from the utility and rely on them for power when the sun does not shine or when our systems are too small. so i expect to pay a service charge to PECO along with any electrons i use. we can not expect a free ride. - bill
